Sequence 2154, Application US/09187859A
Patent No. 6358920
GENERAL INFORMATION:
APPLICANT: Blaschuk, Orest W.
APPLICANT: Blaschuk, Orest W.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL
TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS
FILE REFERENCE: 10086.4071
CURRENT APPLICATION NUMBER: US/09/187,859A
NUMBER OF SEQ ID NOS: 4052
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 2154
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GENERAL INFORMATION:

Submitted (MAR-1994) to Swiss-Prot.
--- FUNCTION: This protein is one of the nuclear-coded polypeptide chains of cypichrone c oxidase, the terminal oxidase in mitochondrial electron transport.
--- CATALYTIC ACTIVITY: 4 ferrocytochrome c + O(2) = 4 ferricytochrome c + 2 M(2)O.
---- SIMILARITY: Belongs to the cytochrome c oxidase VIII family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TISSUE=Head;

Cendron A; Stacker S, (LUDW-) LUDWIG INST CANCER RES. Hughes RA, Achen MG,

WPI; 2001-442248/47.

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues.

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGPD (vascular endothellal growth factor). The invention relates to a method of producing a mnoneric monocyclic peptide by a measuring betabet a carbon separation distances on opposite antiparallel strands of a

Claim 49; Page 32; 102pp; English.

```
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides dimeric bicyclic peptides (Comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with anglogenesis, contains a mammall with a condition characterised by anglogenesis, in a mammall with a condition characterised by anglogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, recondition is diabetic retinopathy, psoriasis, arthropathy, cerebrovascular accident, post-angioplasty restenois, head, heat or cold trauma, substance-induced neovascular sequelas, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to inage blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VBGF, VBGF-C or -D and care also used in combination with an anti-inflammatory agent, to treat a discuss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine

The Bequence represents a monomeric monocyclic period by a measuring beta-
whose 3-dimensional structure is modelled on the expose loop of human

WRGFD (vascular endothelial growth factor). The invention relates to a
method of producing a monomeric monocyclic peptide by a measuring beta-
beta carbon separation distances on opposite antiparallel strands of a
cyclising the peptide by oxidising the cysteine residues. The monocyclic
peptides) and a cyclic peptides (comprising 2 linked monocyclic
peptides) and a cyclic peptide with at least one amino acid deleted prior
cyclisation are used to interfere with angiogenesis,
neovascularisation or lymphangiogenesis in a mammal with a condition
characterised by angiogenesis, neovascularisation or lymphangiogenesis.
The condition is diabetic retinopathy, psoriasis, arthropathy,
hemangioma, vascularised malignant or benign tumour, post-recovery
cerebrovascular accident, post-angioplasty restenosis, head, heat or cold
trauma, substance-induced neovascularisation of the liver, excessive
corebrovascular accident, post-angioplasty restenosis, head, heat or cold
trauma, substance-induced neovascularisation of the liver, excessive
creption. The peptides are also used to modulate vascular permeability
cor brain. The peptides are used to image blood vessels and lymphatic
cor brain. The peptides are used to image blood vessels and lymphatic
cor brain. The peptides are used to image blood vessels and lymphatic
cor brain. The peptides are used to image blood vessels and lymphatic
cormulation in peripheral limbs or in lungs, peritoneal cavity, pleura,
corbination in peripheral limbs or in lungs, peritoneal cavity, pleura,
corpusation and biological activity induced by VBGF. Or -D and
are also used in combination with an anti-inflammatory agent, to treat a
corpusation and accident and provine and accident an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ۲,

                                                                                                                                                                                                                                                                                                                              The present sequence is a specific example of a fluorogenic substrate for detecting activity of a protease. The substrate agrees with the generic formula (S1)n-C1(F1)-E-C2(F2)-(S2)k in which a peptide P of 2-8 amino acids comprising a recognition site for the protease is flanked by conformation determining regions (C1 and C2) of 1-3 amino acids. C1 and C2 are labelled by fluorophore groups (F1 and F2, respectively) positioned within 100 angstroms of each other. Additional peptide spacers of 1-50 amino acids (S1 and S2) may also be present (i.e. n and k = 0 or 1). Fluorogenic substrates corresponding to the generic formula are used to detect or localise proteases in biological specimens, esp. in frozen tissue sections or to monitor protease activity in stored reagents. Changes in protease activity are associated with e.g. arthritis, camplysem, thrombosis and cancer metastasis. (Updated on 25-MAR-2003 to

```
composition which is used for the detection of protease activity in biological samples. The products can be used for the detection of conformation changes in nucleic acids, oligosaccharides, polyacaccharides, proteins, peptides, lipids, phopholipids, glycolipids, glycoproteins, steroids or polymers. In addition, attachment of a hydrophobic group to amolecule can be used to enhance uptake by cells. The composition is composed of P = peptide comprising a protease binding site for the protease, Fl, F2 peptides = fluorophores where Fl is attached to the amino terminal amino acid and F2 is attached to the carboxyl terminal amino acid and S1, S2 peptides = when present, are peptide spacers where S1, when present, is attached to the amino terminal acid, and S2, when present, is attached to the carboxyl terminal acid, and S2, when
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protease binding site; protease; protease indicator; fluorescent signal; detection; protease activity.
                                                                                                                                                                                                                                                                                                                                                                   New fluorogenic compositions - containing 2 fluorophores separated by a peptide comprising a protease binding site, used for detecting protease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAW82023-W82240 are peptides used in the construction of a fluorogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Fluorogenic substrates for protease determination - having two closely

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAW82094
   ⋩
                                                     The present peptide contains a protease binding site. It is used to produce novel reagents whose fluorescence increases in the presence of particular proteases. These fluorescence indicators (substrates) produce novel reages. These fluorescent signal at a visible wavelength when they are digested by a protease. The fluoregenic indicators have the centaining a protease binding site e.g. AAW4650-53, AAW4656. Fr and F2 containing a protease binding site e.g. AAW4650-53, AAW4656. Fr and F2 containing a protease binding site e.g. AAW4650-53, AAW4656-Fr and F2 containing a protease binding site e.g. AAW4650-53, AAW4656-Fr and F2 containing a protease binding site e.g. AAW4650-53, AAW4654-58. n. k = 0 or 1. Cl and C2 are conformation-determining regions that introduce a bend into the composition which positions the fluorophores adjacent to cach other with a separation of less than 100 Augstrom. When n is 1, S1 is joined to the terminal carboxy group of Cl by a peptide bond, and when k is 1, S2 is joined to the terminal carboxy group of C2 by a peptide bond. The protease indicators are used for detecting protease activity in a biological sample. The sample is contacted with the indicator and any change in fluorescence is detected, an increase in

The present peptide contains a protease binding site. It is used to produce novel reagents whose fluorescence increases in the presence of produce novel reagents whose fluorescence increases in the presence of particular proteases. These fluorescent signal at a visible wavelength when provide a high intensity fluorescent signal at a visible wavelength when they are digested by a protease. The fluorescent indicators have the general formula: F1-C1-P-C2-F2 | (S1) (S2)k where: P is a peptide containing a protease binding site e.g. AAM46560. F1 and F2 or I. C1 and C2 are conformation-determining regions that introduce a conformation-determining regions that introduce a cent other with a separation of less than 100 Angstrom. When n is 1, S1 is joined to the terminal carboxy group of C1 by a peptide bond, and when k is 1, S2 is joined to the terminal carboxy group of C2 by a peptide bond. The protease indicators are used for detecting protease cutivity in a biological sample. The sample is contacted with the indicator and any change in fluorescence is detected, an increase in
                                                                                                                                                                                            Fluorogenic substrates for protease determination - having two closely spaced fluorophores flanking protease binding site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protease detection; peptide cleavage; enzyme activity; fluorogenic; viral infection; cancer metastasis; emphysema; arthritis; thrombosis; baemophilia.

The products can be used for the detection of conformation changes in nucleic acids, oligosaccharides, polyeaccharides, proteins, peptides, lipids, phobbolipids, glycolipids, glycoproteins, steroids or polymers. In addition, attachment of a hydrophobic group to a molecule can be used to enhance uptake by cells. The composition is composed of P = peptide comprising a protease binding site for the protease, F1, F2 peptides = fluorophores where F1 is attached to the amino acid and S1, S2 peptides = when present, are peptide spacers where S1, when present, is attached to the amino terminal acid, and S2, when present, is attached to the amino acid, and S2, when present, is attached to the amino acid, and S2, when

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          \frac{1}{2}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note= "F2, where F2 is an acceptor fluorophore rhodamine X acetamide (R492)"
                                                                                                                                     The present invention describes fluorogenic compositions which can be used for the detection of protease activity. This can be useful as an indicator of viral infection, cancer metaersais, haemophilia, emphysema, thrombosis and arthritis. The fluorogenic compositions comprise a peptide, a peptide spacer and a donor and an acceptor fluorophore. The peptide, is cleaved by a protease and the fluorophores can then be detected. The present sequence is one of the peptides described in the exemplification of the invention
                                                                        New fluorogenic compositions whose fluorescence level increases in the presence of active proteases, useful for detecting and localizing protease activity in biological samples, particularly in frozen tissue
                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                         Protease; indicator; chromophore; H-dimer; fluorescence; absorbance; nuclease; screening; fluorophore; substrate cleavage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "F1, where F1 is a donor fluorophore 5'-carbocytetramethylrhodamine (C2211)"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        both absorb and early the visible range (400-800 nm). These signals are therefore not readily quenched by, nor is activation of the fluorophores, that is, absorption of light, interfered with by background molecules; therefore they are easily detected in biological samples. The fluorogenic protease indicators utilise high efficiency fluorophores and are able to achieve a high degree of quenching while providing a strong signal when the quench is released by cleavage of the peptide substrate. The high signal allows detection of very low levels of protease activity. Thus the fluorogenic protease indicators are particularly well snited for in situ detection of protease activity, ABUG0357-ABUG0477 represent peptides use to illustrate the method described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Membrane translocating peptide, MTLP; human; intracellular gene delivery; epithelial cell layer; gastrointestinal tract; circulatory system.
                                                                                                                                                                                                                                                                                                                                                                     (referred as homo-
Indicator composition comprising polypeptide or nucleic acid backbone joining two same chromophores resulting in quenching of fluorescence of/change in absorbance of chromophores, useful for detecting protease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                          The sequence represents a human membrane translocated peptide (WTLP).

WTLPs and their related fragments, motifs derivatives and analogues are used for enhancing uptake of a pharmaceutically active agent into a cell, into or out of an intracellular compartment and across a cell layer (for example, an epithelial cell layer liming the gastrointestinal tract), either directly or from a pharmaceutically active agent loaded particle, into the circulatory system of an animal. This method is useful for intracellular gene delivery, as a rapid screening method for the identification of MTLPs which retain the functional activity of a MTLP and characterising the properties of a MTLP, for diagnosis of a pathological discorder (by administration of a MTLP-active particle complex comprising a diagnostic agent complex or MTLP-active particle complex comprising a diagnostic agent complex or MTLP-active particle complex comprising a diagnostic agent) and for preventing or treating a pathological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0

The invention relates to a novel method for increasing the levels of a protein in a Peyer's patch cell. The method comprises delivering to the cell a nucleic acid coding for a protein, the level of which or its mRNA is greater than in a non-Peyer's patch cell. The preferred protein of the cell a nucleic acid coding for a protein, the preferred protein of the is greater than in a non-Peyer's patch cell. The preferred protein of the cell in greater than in a non-Peyer's patch of a protein that activates of the invention is transcription factor of transcription 3, NfKappa&bgr; Tf plo5 signal transducer and activator of transcription 3, NfKappa&bgr; Tf plo5 computer, S-myc prote-oncogene, myc related, Nm3-M2, nucleoside cliphosphate kinase B, metastasis reducing protein, and C-est-I prote-oncogene, and p54. The preferred upregulated protein of the invention is selected from clusterin. T-cell surface glycoprotein CD5 precursor, HSP selected from the group. The method is useful for increasing or a protein in a Peyer's patch cell, particularly in increasing antigen or vaccine delivery to M cells. The method may also the used to enhance transport of a drug through the gastrointestinal tract increasing antigen or vaccine delivery to M cells. The method may also the used to enhance transport of a drug through the gastrointestinal tract increasing minimal tract in the protein of the transport of a drug through the gastrointestinal tract increasing matched the membrane translocating peptide of the
Increasing the levels of a protein in a Peyer's patch cell, useful for targeted vaccine or drug delivery, comprises delivering to the Peyer's patch cell a transcription factor or an activator of a transcription

Monitoring 83P2H3 gene products for monitoring the presence of cancer in a subject, comprises determining the status of 83P2H3 gene products in a tissue sample from the subject and comparing it to a normal sample. Example 11; Page 173; 270pp; English.

The invention relates to monitoring 83P2H3 (a calcium transport protein whose gene is located on chromosome 7q34) gene products in a biological cample from a patient who has or is suspected of having cancer (sepecially prostate cancer). Comprises: (a) determining the status of 83P2H3 gene products expressed by cells in a tissue sample from an individual and (b) comparing the status to the status of 83P2H3 gene products in a normal sample. Also included are modulators of 83P2H3 gene products in a normal sample. Also included are modulators of 83P2H3 correction or status, generating antibodies/immune response against 83P2H3 function or status, generating antibodies/immune response against 83P2H3 correction denitied Hia (human leukocyte antigen) binding peptides derived from the protein, delivering a cytotoxic agent to a cell cerombinant protein comprising an antigen-binding region of the antibody, a recombinant protein comprising an antigen-binding region of the antibody, a recombinant protein, a phyridoma that produces the recombinant protein, a monoclonal antibody that comprises the recombinant protein, a polymicleotide that encodes the monoclonal antibody and inducing an immune response to a 83P2H3 antibody, a vector comprising a content that comprises a T cell or B cell respectively. The method immune response to a 83P2H3 antibody, a vector comprising a susful for monitoring salter of cancer in an individual. The modulator is useful for inhibiting the growth of cancer cells that express 83P2H3. For encoding an antibody is useful for inhibiting the growth of cancer cells that express 83P2H3. For encoding salter and the vector is useful for treating an immune system T cell or B cell, respectively. The method cancer that expresses 83P2H3. The immunological methods are useful for reating an immune response against sapplit) and for detecting the presence of 83P2H3. The immunological methods are useful for amplituation and treatment, to detect and quantify sand mutant cancer that expresses 83P2H3. The immunological isolating 83P2H3 homologues/related molecules, and for generating anti-idiotypic antibodies that mimic the 83P2H3 protein. The present sequence is an HLA binding peptide motif from 83P2H3 or its related protein

Human novel protein CaTrF2E11 HLA binding peptide #84.

Human, human leukocyte antigen; HIA; immunogen; 83P2H3; CaTrF2Ell; calcium transport protein; cancer; prostate cancer; cytostatic; chromosome 7q34; chromosome 12q24.1; T cell; B cell.

WO200214361-A2.

```
The invention relates to monitoring 8322H3 (a calcium transport protein whose gene is located on chromosome 7q34) gene products in a biological ample from a patient who has or is suspected of having cancer (especially prostate cancer), comprises: (a) determining the status of 83P2H3 gene products expressed by cells in a tissue sample from an individual and (b) comparing the status to the status of 83P2H3 gene products in a normal sample. Also included are modulators of 83P2H3 gene products in a normal sample. Also included are modulators of 83P2H3 correction or status, generating antibodies/immune response against 83P2H3 (or related protein Carryzzzii whose gene is located on chromosome capressing 83P2H3 by conjugating the agent to a cell carryzed from the protein dalivering a cytotoxic agent to a cell carryzed in 83P2H3 by conjugating the agent to an anti-83P2H3 antibody, a recombinant protein comprising an antigen-binding region of the antibody, a recombinant produces the recombinant protein, a produces the recombinant protein, a produces the recombinant protein, a comprises the variable domains of the heavy and connoclonal antibody that comprises the variable domains of the heavy and light chains of the anti-83P2H3 antibody a vector comprising a polymucleotide that encodes the monoclonal antibody and inducing an immune system T cell or B cell, respectively. The method is useful for monitoring 83P2H3 gene products in a biological sample for monitoring the presence of cancer in an individual. The modulator is useful for inhibiting the growth of cancer cells that express 83P2H3, for treating cancer and the vector is useful for treating an immune response against 83P2H3, and for detecting the presence of cancer in an individual. The modulator is useful for an expense 83P2H3. The immunological methods are useful for semence of 83P2H3-related protein or polymucleotide in a biological method are useful for an expense sample for the holds or polymoleotide in a biological method is useful for an expense against 83P2H
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antibody is useful in prostate cancer diagnosis, prognosis, imaging methodologies and treatment, to detect and quantify 83PSH3 and mutant 83PSH3-related proteins, for purifying a 83P2H3-related protein, for isolated protein, for isolatypic antibodies that mimic the 83P2H3 protein. The present sequence is an HLA binding peptide motif from 83P2H3 or its related protein
                                                                                                                                                                                                                                                                                                                                                     Monitoring 83P2H3 gene products for monitoring the presence of cancer in a subject, comprises determining the status of 83P2H3 gene products in a tissue sample from the subject and comparing it to a normal sample.

Monitoring 83P2H3 gene products for monitoring the presence of cancer in a subject, comprises determining the status of 83P2H3 gene products in a tissue sample from the subject and comparing it to a normal sample.

Example 11; Page 191; 270pp; English.

The invention relates to monitoring 83P2H3 (a calcium transport protein whose gene is located on chromosome 7q34) gene products in a biological sample from a patient who has or is suspected of having cancer (especially prostate cancer). Comprises (a) determining the status of 83P2H3 gene products expressed by cells in a tissue sample from an individual and (b) comparing the status to the status of 83P2H3 gene products in a normal sample. Also included are modulators of 83P2H3 correction or status, generating antibodices/immune response against 83P2H3 (or related protein CarrP2EL1 whose gene is located on chromosome 12q24.1) using identified H1A (human leukocyte antigen) binding peptides derived from the protein, delivering a cytocoxic agent to a cell 2q24.1) using identified H1A (human leukocyte antigen) binding peptides derived from the protein, delivering a cytocoxic agent to a cell 2q24.1) using identified H1A (human leukocyte antigen) binding peptides derived from the protein comprising an antigen-binding region of the antibody, a recombinant protein comprising an antigen-binding region of the antibody, a recombinant protein, a single-chain monoclonal antibody that comprises the wariable domains of the heavy and light chains of the anti-83P2H3 antibody, a vector comprising an immune response to a 83P2H3 antibody, a vector comprising an immune response to a 83P2H3 antibody, a vector comprising of protein that comprises a T cell or B cell epitope, and contacting the presence of cancer in an individual. The modulator is useful for monitoring 183P2H3 gene products in a biological sample for monitoring the vector is useful for the growth of cancer cells that expresses 83P2H3. The immune response against 83P2H3, and concacting the cancer that expresses 83P2H3. and cancer that expresses 83P2H3 and cancer disponse to a batient with a sample from a patient who has or who is suspected of having cancer. The sample from a patient who has or who is suspected of having cancer. The companied of the sample from enthodologi solating 83P2H3 homologues/related molecules, and for generating anti-diotypic antibodies that mimic the 83P2H3 protein. The present sequence an HLA binding peptide motif from 83P2H3 or its related protein antibody is useful in prostate cancer diagnosis, prognosis, imaging methodologies and treatment, to detect and quantify 83P2H3 and mutant 83P2H3-related proteins, for purifying a 83P2H3-related protein, for

Sequence 21, Application US/08526710
Patent No. 562269
GBNERAL INPORMATION:
APPLICANT: Ruoslalti, Erkki
APPLICANT: Ruoslalti, Renata
TITLE OF INVENTION: Method of Identifying Molecules That
TITLE OF INVENTION: Home to a Selected Organ In Vivo
NUMBER OF SECURNCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell and Flores
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         73.8%; Score 31; DB 1; Length 7; 57.1%; Pred. No. 3e+05; ive 2; Mismatches 1; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SOFTWARE: Patentin Release #1.0, Version #1.25

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 21, Application US/09227906

Patent No. 6306365

GENERAL INFORMATION:

APPLICANT: Rucelahti, Erkki

APPLICANT: Pasqualini, Renata

TITLE OF INVENTION: Method of Identifying Molecules That

TITLE OF INVENTION: Home to a Selected Organ In Vivo

NUMBER OF SEQUENCES: 44

CORRESPONDENCE ADDRESS:

ADDRESSEE: Campbell & Flores LLP

STREET: 4370 La Jolla Village Drive, Suite 700

CITY: San Diego

STATE: California

COUNTRY: United States

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 12
US-09-839-542B-4047
is Sequence 4047, Application US/09839542B
is Patent No. 656996
gransral invorant.
APPLICANT: Blaschuk, Orest W.
APPLICANT: Blaschuk, James Matthew
APPLICANT: Symonds, James Matthew
APPLICANT: Gour, Barbara J.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL
TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS
FILE RERERENCE: 1000664.407D1
CURRENT APPLICATION NUMBER: US/09/839,542B
CURRENT FILING DATE: 2001-04-20
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NOS: 4052
LEMETRY APPLICATION OF THE CONTRACT OF THE CONTRAC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 14

US-09-839-542B-3574

i Sequence 3574, Application US/09839542B

i Patent No. 656996

i GENERAL INFORMATION:

i APPLICANT: Symonda James Matthew

APPLICANT: Symonda James Matthew

i TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL

I TITLE OF INVENTION: CAPHERIA-MEDIATED FUNCTIONS

I TITLE OF INVENTION: CAPHERIA-MEDIATED FUNCTIONS

FILE REPRENCE: 100086.40701

CURRENT FILIG DATE: 2001-04-20

NUMBER OF SEQ ID NOS: 4052

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 3574
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
